INTRROBOTICS ANNOUNCES AWARD OF PATENT ON AUTOMATED TDR TEST TECHNOLOGY

Albuquerque, NM– Inrobotics Corporation today announced that the U.S. Patent & Trademark Office has issued US Patent Nos. 6,759,853. The patent covers the use of a robotic domain reflectometry test system and a method to test PWBs and coupons with the system. The patent teaches the use of such system to collect impedance, propagation delay, and effective dielectric constant information.

Mr. Brian Butler, President of Inrobotics said, “This award highlights the company’s strength in the area of high frequency signal test of electronic components. The technology covered in the patent provides the basis for our highly successful CI1000 Automated TDR Tester and the foundation for our follow-on work in Automated VNA.”

Background Information

Inrobotics specializes in manufacturing patented automated high frequency test equipment including a controlled impedance printed wiring board tester. The testers marry the latest technologies in robotics, high frequency test and software controlled systems. Inrobotics also offers a controlled impedance testing service and can accommodate 30,000 boards per month. Inrobotics is located at 4208 Balloon Park Road, NE, Albuquerque, NM 87109. Inquiries are invited by calling Brian Butler at 1 505 345 7785, fax to 1 505 345 7790, or email info@inrobotics.com. Also visit us at <http://www.inrobotics.com>.
